

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

LABORATORY EXERCISE 3

BUILDING A RESPONSIVE LOGIN & DASHBOARD SYSTEM WITH BOOTSTRAP 5 AND JAVASCRIPT

Learning Objectives

- By the end of this laboratory exercise, students should be able to:
 - Structure a multi-page, semantic web application using HTML5.
 - Implement responsive and visually appealing layouts using the Bootstrap 5 Grid System and its core components (Navbar, Cards, Forms, Alerts, Buttons).
 - Customize Bootstrap's default styling by writing custom CSS to match a unique brand identity.
 - Manipulate the Document Object Model (DOM) using Vanilla JavaScript (ES6) to create dynamic user experiences.
 - Simulate user authentication and state management using local Storage.
 - Apply the "theme" concept by personalizing a generic dashboard for a specific business context.

Prerequisite student experiences and knowledge

Before starting this exercise, students should have:

- Completed Laboratory Exercise 2 (Enhancing HTML Structure & CSS Creativity)
- Basic understanding of HTML tags and semantic elements (header, nav, main, section, footer)
- Familiarity with CSS styling techniques including colors, fonts, and layout
- Basic knowledge of JavaScript syntax (variables, functions, conditionals, events)
- Familiarity with opening files via Live Server or localhost
- XAMPP and VS Code properly installed and configured
- Basic understanding of color schemes and color theory.

Background

In **Laboratory Exercise 2**, you transformed a basic HTML page into a visually appealing, well-structured webpage using semantic HTML elements and a carefully selected color scheme. You learned how CSS controls the presentation layer, including colors, fonts, spacing, and layout. While your webpage was visually engaging, it remained static; it displayed the same content to every user and did not respond to user interactions.

In real-world web development, modern websites and web applications are expected to be interactive and dynamic. They respond to user input, display personalized content, and provide seamless experiences across devices. This is where client-side scripting and front-end frameworks become essential.

JavaScript is the programming language of the web. It allows you to:

- Respond to user actions (clicks, form submissions, keyboard input)
- Dynamically update content without reloading the page
- Validate user input before sending it to a server
- Store and retrieve data locally using localStorage

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

- Create rich, interactive user experiences

Bootstrap 5 is a powerful front-end framework that provides:

- Pre-built CSS components (buttons, cards, forms, navigation bars)
- A responsive grid system for mobile-first design
- JavaScript plugins for interactive components (modals, dropdowns, alerts)
- Consistent, professional styling out of the box

In this exercise, you will combine these technologies to build a fully functional Login & Dashboard system. This two-page application will demonstrate:

- How to structure a multi-page web application
- How to use Bootstrap 5 for rapid, responsive development
- How to customize Bootstrap with your own CSS and color scheme
- How to use JavaScript for user authentication and dynamic content
- How to apply a unique business theme to make your dashboard personalized

Your Theme Challenge:

A generic dashboard is uninteresting and does not demonstrate creativity. You must choose a unique business context or theme for your dashboard that reflects your interests or career aspirations. This theme will influence the design, content, and data displayed on your dashboard.

Example Themes:

- E-commerce Admin Dashboard: Track orders, revenue, customers, and product performance
- Fitness Tracker Dashboard: Monitor steps, calories, workouts, and progress goals
- Student Grade Portal: View overall GPA, current courses, assignments, and grades
- Restaurant Order Manager: Track daily orders, revenue, popular menu items, and table status
- Personal Finance Tracker: Monitor income, expenses, savings, and budget categories
- Project Management Dashboard: Track project status, tasks, deadlines, and team members
- Healthcare Patient Dashboard: Monitor patient appointments, medications, and vital signs
- Travel Planner Dashboard: View upcoming trips, flight status, destinations, and budgets

Materials/Resources

- Personal Computer with Internet Access (Windows, macOS, or Linux).
- XAMPP Installer (downloaded from apachefriends.org).
- Visual Studio Code (downloaded from code.visualstudio.com).
- Web Browser (Google Chrome is recommended).
- Github (<https://github.com/>)
- Color Scheme Resources (for reference):
 - [Coolors.co](https://coolors.co) Color palette generator
 - [Adobe Color](https://color.adobe.com) Color wheel and theme creator
 - [ColorHunt](https://colorhunt.co) Curated color palettes

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

THEORY / CONCEPTS

Bootstrap 5 Framework

Bootstrap is a free, open-source front-end framework that provides a collection of CSS and JavaScript components for building responsive websites quickly. It was originally developed by Twitter and is now one of the most widely used frameworks in web development.

Key Bootstrap 5 Features

Feature	Description	Example Usage
Grid System	12-column responsive layout system	<code><div class="row"></code> with <code><div class="col-md-4"></code>
Components	Pre-built UI elements	Navbar, Cards, Forms, Buttons, Alerts, Modals
Utilities	Helper classes for spacing, typography, colors	<code>d-flex</code> , <code>text-center</code> , <code>mb-3</code> , <code>mt-4</code>
Responsive Breakpoints	Mobile-first design with breakpoints	<code>sm</code> , <code>md</code> , <code>lg</code> , <code>xl</code> , <code>xxl</code>
JavaScript Plugins	Interactive components	Dropdowns, Collapse, Carousel, Modal

Bootstrap 5 Grid System

The Bootstrap grid system uses a series of containers, rows, and columns to layout and align content. It is built with flexbox and is fully responsive.

```
<div class="container">
  <div class="row">
    <div class="col-md-6">Column 1</div>
    <div class="col-md-6">Column 2</div>
  </div>
</div>
```

Client-Side Scripting with JavaScript

JavaScript is a high-level, interpreted programming language that enables interactive web pages. It is an essential part of web applications, providing dynamic functionality on the client side.

Concept	Description	Example
---------	-------------	---------

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

Variables	Containers for storing data	<code>let username = "admin";</code>
Functions	Reusable blocks of code	<code>function checkLogin() { ... }</code>
Event Listeners	Respond to user actions	<code>button.addEventListener('click', doSomething);</code>
DOM Manipulation	Changing HTML content dynamically	<code>document.getElementById('greeting').innerHTML = "Hello!";</code>
localStorage	Store data in the browser	<code>localStorage.setItem('key', 'value');</code>
Conditionals	Execute code based on conditions	<code>if (username === 'admin') { ... }</code>

Document Object Model (DOM)

The Document Object Model (DOM) is a programming interface for web documents. It represents the page so that programs can change the document structure, style, and content. The DOM represents the document as a tree of objects.

```
const element = document.getElementById('myElement');  
element.innerHTML = 'New content';  
element.style.color = 'red';
```

Web Storage API: localStorage

The Web Storage API provides mechanisms for storing key-value pairs in the browser. localStorage stores data with no expiration date and persists even after the browser is closed.

Common localStorage Methods

Method	Description	Example
<code>setItem()</code>	Store a key-value pair	<code>localStorage.setItem('name', 'John');</code>
<code>getItem()</code>	Retrieve a value by key	<code>let name = localStorage.getItem('name');</code>
<code>removeItem()</code>	Remove a key-value pair	<code>localStorage.removeItem('name');</code>
<code>clear()</code>	Remove all stored data	<code>localStorage.clear();</code>

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

Bootstrap Customization with CSS

Bootstrap can be customized by overriding its default variables and styles. This allows you to maintain consistency with your brand or theme.

CSS Variable Overrides

```
:root {  
  --bs-primary: #1a5276;  
  --bs-secondary: #2980b9;  
  --bs-success: #28a745;  
  --bs-danger: #dc3545;  
  --bs-warning: #ffc107;  
}
```

Custom CSS Classes

```
.custom-card {  
  box-shadow: 0 4px 6px rgba(0, 0, 0, 0.1);  
  border-radius: 8px;  
  transition: transform 0.3s ease;  
}  
  
.custom-card:hover {  
  transform: translateY(-5px);  
}
```

Color Theory and Scheme Selection

A well-chosen color scheme creates visual hierarchy, establishes brand identity, improves readability, and makes websites look professional.

Color Harmony Types (Review from Lab 2):

1. Monochromatic: Variations of one color (different shades and tints)
2. Complementary: Two colors opposite on the color wheel
3. Analogous: Three colors adjacent on the color wheel
4. Triadic: Three colors equally spaced on the color wheel

Color Roles in a Dashboard

Color Role	Purpose	Example Usage
Primary	Brand color for headers, navigation, buttons	Navbar background, main buttons
Secondary	Supporting color for accents, borders	Input focus, link colors
Background	Light/neutral color for page background	Page background, card backgrounds

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

Text	Dark/readable color for main text	Body text, headings
Accent	Bold color for emphasis and call-to-action elements	Alert messages, important numbers
Success	Green for positive indicators	Profit numbers, completion status
Danger	Red for warnings or negative indicators	Loss numbers, alerts

Example Color Scheme (Emerald Theme)

Color Name	Hex Code	Usage
Primary	#0d5c3e	Headers, navigation, primary buttons
Secondary	#1a936f	Accents, links, secondary buttons
Background	#f0f7f4	Page background
Text	#1a2e24	Main text, headings
Accent	#f3a712	Highlights, important numbers
Light Accent	#d4ece4	Section backgrounds, cards

Laboratory Activity

Part 1: Selecting Your Color Scheme and Theme

Before writing any code, you must select a color scheme and business theme that will define the visual identity of your dashboard.

Step 1: Choose Your Business Theme

Select one unique business context from the list below or propose your own (instructor approval required):

- E-commerce Admin Dashboard
- Fitness Tracker Dashboard
- Student Portal
- Restaurant Management

Step 2: Select Your Color Scheme

1. Open your web browser and visit one of the color palette websites:
 - Colors.co
 - Adobe Color
 - ColorHunt
2. Browse through existing palettes or generate a new one.
3. Select or create a color scheme with 4-6 colors that work harmoniously together and match your chosen theme.
4. Write down or copy the color codes (hex values) of your chosen colors.

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

5. Example Color Scheme (Emerald Theme for Fitness Tracker):

Color Name	Hex Code	Usage
Primary	#0d5c3e	Headers, navigation, primary buttons
Secondary	#1a936f	Accents, links, secondary buttons
Background	#f0f7f4	Page background
Text	#1a2e24	Main text
Accent	#f3a712	Highlights, important numbers
Light Accent	#d4ece4	Section backgrounds, cards

Part 2: Project Setup and HTML Skeleton

Step 1: Create Project Folder Structure

1. Open Visual Studio Code.
2. Navigate to your lab folder (where you stored Lab 1 and Lab 2).
3. Create a new folder named lab3_YourStudentID (e.g., lab3_20251234).
4. Inside this new folder, create the following structure:

```
lab3_YourStudentID/  
├── index.html           (Login Page)  
├── dashboard.html      (Dashboard Page)  
├── css/  
│   └── style.css       (Custom CSS)  
├── js/  
│   ├── login.js        (Login page JavaScript)  
│   └── dashboard.js     (Dashboard page JavaScript)  
└── assets/             (Optional: images, icons)  
    └── logo.png
```

Step 2: Create the Login Page (index.html)

1. Create a new file named **index.html** in your lab3_YourStudentID folder.
2. Type **!** and press Tab to generate the HTML5 boilerplate.
3. In the **<head>** section, link the Bootstrap 5 CSS CDN and your custom CSS file.

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Login - [Your Theme Name]</title>
  <!-- Bootstrap 5 CSS CDN -->
  <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.0-alpha1/dist/css/bootstrap.min.css" rel="stylesheet">
  <!-- Custom CSS -->
  <link rel="stylesheet" href="css/style.css">
</head>
<body>
  <!-- Login content goes here -->
  <div class="container">
    <!-- Bootstrap 5 JavaScript CDN -->
    <script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.0-alpha1/dist/js/bootstrap.bundle.min.js"></script>
    <!-- Custom JavaScript -->
    <script src="js/login.js"></script>
  </div>
</body>
</html>
```

Step 3: Create Project Folder Structure

1. Create a new file named dashboard.html in your lab3_YourStudentID folder.
2. Add the same Bootstrap CDN links and custom CSS file in the <head> section.
3. Add the Bootstrap JS and your custom dashboard.js script before the closing </body> tag.

Part 3: Building the Login Page (index.html)

Step 1: Create the Login Card Container

Inside the <body> tag of index.html, create a full-page centered container:

```
<div class="container d-flex justify-content-center align-items-center min-vh-100">
  <div class="card shadow-lg" style="max-width: 400px; width: 100%;">
    <!-- Card content goes here -->
  </div>
</div>
```

Step 2: Add Card Header with Logo/Branding

```
<div class="card-header bg-primary text-white text-center py-4">
  <h2 class="mb-0">[Your Theme Name]</h2>
  <p class="mb-0 small">Login to your dashboard</p>
</div>
```

Step 3: Add the Login Form

Inside the card body, create a form with the following fields:

Note: The type="button" on the login button prevents the page from reloading, allowing JavaScript to handle the login process.

Step 4: Customize the Login Page for Your Theme

1. Replace **[Your Theme Name]** with your chosen business theme
2. Customize the background color or add a branded logo area using custom CSS

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

```
<nav class="navbar navbar-expand-lg navbar-dark bg-primary">
  <div class="container-fluid">
    <a class="navbar-brand fw-bold" href="#">
      [Your Theme Name]
    </a>
    <button class="navbar-toggler" type="button" data-bs-toggle="collapse" data-bs-target="#navbarNav">
      <span class="navbar-toggler-icon"></span>
    </button>
    <div class="collapse navbar-collapse" id="navbarNav">
      <ul class="navbar-nav ms-auto">
        <li class="nav-item">
          <span class="navbar-text text-white me-3" id="userDisplay">
            Welcome, <span id="userName">User</span>
          </span>
        </li>
        <li class="nav-item">
          <button class="btn btn-outline-light btn-sm" id="logoutBtn">Logout</button>
        </li>
      </ul>
    </div>
  </div>
</nav>
```

3. Consider adding a background image or gradient to the page body

Part 4: Building the Dashboard Page (dashboard.html)

Step 1: Create the Navigation Bar

```
<div class="card-header bg-primary text-white text-center py-4">
  <h2 class="mb-0">[Your Theme Name]</h2>
  <p class="mb-0 small">Login to your dashboard</p>
</div>

<div class="card-body p-4">
  <div id="loginFeedback"></div>

  <form id="loginForm">
    <!-- Username Field -->
    <div class="mb-3">
      <label for="username" class="form-label">Username</label>
      <div class="input-group">
        <span class="input-group-text"><i class="bi bi-person"></i></span>
        <input type="text" class="form-control" id="username" placeholder="Enter username required">
      </div>
    </div>

    <!-- Password Field -->
    <div class="mb-3">
      <label for="password" class="form-label">Password</label>
      <div class="input-group">
        <span class="input-group-text"><i class="bi bi-lock"></i></span>
        <input type="password" class="form-control" id="password" placeholder="Enter password required">
      </div>
    </div>

    <!-- Remember Me Checkbox -->
    <div class="mb-3 form-check">
      <input type="checkbox" class="form-check-input" id="rememberMe">
      <label class="form-check-label" for="rememberMe">Remember Me</label>
    </div>

    <!-- Login Button -->
    <button type="button" class="btn btn-primary w-100 py-2" id="loginBtn">
      Login
    </button>
  </form>

  <div class="text-center mt-3">
    <small class="text-muted">Demo credentials: admin / password123</small>
  </div>
</div>
```

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

Step 2: Create the Sidebar and Main Content Layout

```
<div class="container-fluid">
  <div class="row">
    <!-- Sidebar -->
    <nav class="col-md-3 col-lg-2 d-md-block bg-light sidebar vh-100 p-3">
      <div class="position-sticky">
        <ul class="nav flex-column">
          <li class="nav-item">
            <a class="nav-link active" href="#">
              Dashboard
            </a>
          </li>
          <li class="nav-item">
            <a class="nav-link" href="#">Profile</a>
          </li>
          <li class="nav-item">
            <a class="nav-link" href="#">Settings</a>
          </li>
          <li class="nav-item">
            <a class="nav-link text-danger" href="#" id="logoutLink">Logout</a>
          </li>
        </ul>
      </div>
    </nav>

    <!-- Main Content -->
    <main class="col-md-9 ms-sm-auto col-lg-10 px-md-4 py-4">
      <!-- Content goes here -->
    </main>
  </div>
</div>
```

Step 3: Add Main Content Components

Inside the <main> section, add:

Welcome Greeting

```
<div class="d-flex justify-content-between flex-wrap flex-md-nowrap align-items-center pb-2 mb-3 border-bottom">
  <h2 id="greeting">Good Morning, User!</h2>
</div>
```

Statistic Cards

Create 4 statistic cards that represent key metrics for your theme.

      <div class="card-body">
        <h5 class="card-title text-muted" id="stat1-title">Total Orders</h5>
        <h2 class="card-text fw-bold text-primary" id="stat1-value">0</h2>
      </div>
    </div>
  </div>
  <div class="col-md-3 mb-3">
    <div class="card stat-card text-center">
      <div class="card-body">
        <h5 class="card-title text-muted" id="stat2-title">Revenue</h5>
        <h2 class="card-text fw-bold text-success" id="stat2-value">$0</h2>
      </div>
    </div>
  </div>
  <div class="col-md-3 mb-3">
    <div class="card stat-card text-center">
      <div class="card-body">
        <h5 class="card-title text-muted" id="stat3-title">New Customers</h5>
        <h2 class="card-text fw-bold text-info" id="stat3-value">0</h2>
      </div>
    </div>
  </div>
  <div class="col-md-3 mb-3">
    <div class="card stat-card text-center">
      <div class="card-body">
        <h5 class="card-title text-muted" id="stat4-title">Return Rate</h5>
        <h2 class="card-text fw-bold text-warning" id="stat4-value">0%</h2>
      </div>
    </div>
  </div>
</div>
```

Recent Activity Table

Create 4 statistic cards that represent key metrics for your theme.

```
<div class="card">
  <div class="card-header">
    <h5 class="mb-0">Recent Activity</h5>
  </div>
  <div class="card-body">
    <div class="table-responsive">
      <table class="table table-striped table-hover">
        <thead>
          <tr>
            <th>Date</th>
            <th>Activity</th>
            <th>Status</th>
          </tr>
        </thead>
        <tbody id="activityTableBody">
          <!-- Dynamic content will be inserted here by JavaScript -->
        </tbody>
      </table>
    </div>
  </div>
</div>
```

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

Step 4: Customize for Your Theme

Replace placeholder text with theme-specific content:

1. For E-commerce: Orders, Revenue, Customers, Return Rate
2. For Fitness Tracker: Steps, Calories, Workouts, Heart Rate
3. For Student Portal: GPA, Courses, Assignments, Attendance
4. For Restaurant Management: Orders, Revenue, Tables, Popular Items

Part 5: JavaScript Interactivity and Logic

Step 1: Create the Login Script (js/login.js)

Create a new file named login.js in the js folder:

```
document.addEventListener('DOMContentLoaded', function() {  
  
    const loginBtn = document.getElementById('loginBtn');  
    const usernameInput = document.getElementById('username');  
    const passwordInput = document.getElementById('password');  
    const feedbackDiv = document.getElementById('loginFeedback');  
  
    if (localStorage.getItem('isLoggedIn') === 'true') {  
        window.location.href = 'dashboard.html';  
    }  
  
    loginBtn.addEventListener('click', function() {  
        const username = usernameInput.value.trim();  
        const password = passwordInput.value.trim();  
  
        feedbackDiv.innerHTML = '';  
  
        if (username === '' || password === '') {  
            showFeedback('Please enter both username and password.', 'danger');  
            return;  
        }  
  
        const validUsername = 'admin';  
        const validPassword = 'password123';  
  
        if (username === validUsername && password === validPassword) {  
            localStorage.setItem('isLoggedIn', 'true');  
            localStorage.setItem('user', username);  
  
            showFeedback('Login successful! Redirecting...', 'success');  
  
            setTimeout(function() {  
                window.location.href = 'dashboard.html';  
            }, 1000);  
        } else {  
            showFeedback('Invalid username or password. Please try again.', 'danger');  
        }  
    }  
});
```

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

```
function showFeedback(message, type) {  
    const alertClass = type === 'danger' ? 'alert-danger' : 'alert-success';  
    feedbackDiv.innerHTML = `  
        <div class="alert ${alertClass} alert-dismissible fade show" role="alert">  
            ${message}  
            <button type="button" class="btn-close" data-bs-dismiss="alert" aria-label="Close"></button>  
        </div>  
    `;  
}  
  
usernameInput.addEventListener('keypress', function(e) {  
    if (e.key === 'Enter') {  
        loginBtn.click();  
    }  
});  
  
passwordInput.addEventListener('keypress', function(e) {  
    if (e.key === 'Enter') {  
        loginBtn.click();  
    }  
});  
});
```

Step 2: Create the Dashboard Script (js/dashboard.js)

Create a new file named dashboard.js in the js folder:

```
document.addEventListener('DOMContentLoaded', function() {  
  
    const isLoggedIn = localStorage.getItem('isLoggedIn');

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

Step 3: Customize the JavaScript for Your Theme

1. Modify the stats array in `updateStatistics()` to reflect your chosen theme
2. Update the activities array in `populateActivityTable()` with theme-appropriate entries
3. Ensure the stat card IDs in your HTML match the JavaScript (stat1-title, stat1-value, etc.)

Part 6: Custom CSS Styling and Theme Implementation

Step 1: Create the CSS File (css/style.css)

Create a new file named `style.css` in the `css` folder:

```
.root {
  --bs-primary: #0d5c3e;
  --bs-primary-rgb: 13, 92, 62;
  --bs-secondary: #1a936f;
  --bs-secondary-rgb: 26, 147, 111;
  --bs-success: #28a745;
  --bs-info: #17a2b8;
  --bs-warning: #ffc107;
  --bs-danger: #dc3545;

  /* Custom Theme Colors */
  --theme-primary: #0d5c3e;
  --theme-secondary: #1a936f;
  --theme-accent: #ffc107;
  --theme-background: #f8f9fa;
  --theme-light-accent: #d4edda;
  --theme-text: #1a2e34;
}

body {
  background-color: var(--theme-background);
  color: var(--theme-text);
  font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
}

.login-page {
  background: linear-gradient(135deg, var(--theme-primary), var(--theme-secondary));
  min-height: 100vh;
}

.login-card {
  border: none;
  border-radius: 12px;
  overflow: hidden;
  box-shadow: 0 10px 40px rgba(0, 0, 0, 0.2);
}

.login-card .card-header {
  background: linear-gradient(135deg, var(--theme-primary), var(--theme-secondary));
  border-bottom: none;
}

.sidebar {
  background-color: #ffffff;
  border-right: 1px solid rgba(0, 0, 0, 0.1);
  box-shadow: 2px 0 5px rgba(0, 0, 0, 0.05);
}

.sidebar .nav-link {
  color: var(--theme-text);
  border-radius: 8px;
  padding: 10px 16px;
  margin-bottom: 4px;
  transition: all 0.3s ease;
}

.sidebar .nav-link:hover {
  background-color: var(--theme-light-accent);
  color: var(--theme-primary);
}

.sidebar .nav-link.active {
  background-color: var(--theme-primary);
  color: #ffffff;
}
```

  }
}
```

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

Step 2: Customize the CSS for Your Theme

1. Replace the placeholder color hex values with your chosen color scheme
2. Replace [Your Theme Name] with your selected business theme
3. Modify the gradient colors to match your theme
4. Add any additional custom styles to enhance your theme

Step 3: Apply Custom Classes to Your HTML

Add the custom classes you created in CSS to elements in your HTML:

```
<div class="card stat-card shadow-hover text-center">  
  
</div>  
  
<tr class="border-accent">  
  
</tr>  
  
<body class="login-page">
```

Step 1: Create the CSS File (css/style.css)

Step 1: Create the CSS File (css/style.css)

Step 1: Create the CSS File (css/style.css)

Part 7: Push to GitHub

Method 1: Using Live Server

1. In VS Code, right-click on your index.html file.
2. Select "Open with Live Server".
3. Your browser will open with a live preview that auto-refreshes when you save changes.

Method 2: Using XAMPP

1. Ensure Apache is running in XAMPP Control Panel.
2. Copy your lab3_YourStudentID folder to the htdocs directory.
3. Open your web browser and navigate to:
 - o http://localhost/lab3_YourStudentID/
 - o (If using port 8080: http://localhost:8080/lab3_YourStudentID/)
4. Verify that your pages load correctly with all styles applied.

Testing Checklist:

- o Login page loads correctly with Bootstrap styling
- o Login form accepts demo credentials: admin / password123
- o Invalid credentials display an error alert
- o Successful login redirects to dashboard.html
- o Dashboard page displays the user's name
- o Greeting changes based on time of day
- o Statistic cards display theme-appropriate data
- o Activity table is populated with sample data
- o Logout button/links clear session and redirect to login

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

- Trying to access dashboard.html without logging in redirects to login
- Layout is responsive on mobile, tablet, and desktop

Part 5: Push to GitHub

1. Open your GitHub repository (created in Laboratory Exercise 1).
2. Add your lab3_YourStudentID folder to the repository.
3. Commit and push your changes with a meaningful commit message:
 - Example: "Added Laboratory Exercise 3: Login & Dashboard System with Bootstrap 5"
4. Take a screenshot of your GitHub repository showing the new files.

Output / Results

Take a screenshot of the following outputs and paste them into your lab report document:

- Screenshot 1: VS Code editor showing your complete index.html code
- Screenshot 2: VS Code editor showing your complete dashboard.html code
- Screenshot 3: VS Code editor showing your login.js and dashboard.js code
- Screenshot 4: VS Code editor showing your style.css code with your color scheme
- Screenshot 5: Your web browser displaying the Login page with URL visible
- Screenshot 6: Your web browser displaying the Dashboard page with URL visible
- Screenshot 7: Your web browser showing the responsive layout on mobile (use Chrome DevTools)
- Screenshot 8: Your GitHub repository showing the history of commits and the new lab3_YourStudentID folder
- Screenshot 9: Your color palette/color scheme (including hex codes) from Part 1

Submission Guidelines

- ✓ Name the file as: Lab3_YourStudentId_YourLastName.pdf
- ✓ Submit the file to your instructor via the Learning Management System (LMS) provided before the start of the next laboratory session.
- ✓ Required Format: Include all screenshots from the Output/Results section in your PDF report.
- ✓ Questionnaire: Answer all questions in the Questions section below in your report.
- ✓ Conclusion: Write a brief conclusion summarizing what you learned in this laboratory exercise.

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

QUESTIONS:

1. In Laboratory Exercise 2, you created a static webpage using only HTML and CSS. In this exercise (Lab 3), you added JavaScript to create dynamic functionality. Compare the two approaches by answering the following:
 - a. What is the main difference between a static webpage (Lab 2) and a dynamic webpage (Lab 3)?
 - a) In a static webpage (lab 2) we used html and css so the content is static or can't change while in dynamic webpage (lab 3) we added javascript to be interactive with the user action making it responsive and personalized.
 - b. Explain how you used JavaScript to make your dashboard dynamic. Provide at least two specific examples from your code (e.g., the time-based greeting, the stat cards update, or the activity table).
 - a) In my JavaScript it uses the time-based greeting, making the greeting change depending on the user's system clock and using the stat cards update, it updates the activity from the activity table that is just static in html.
 - c. In Lab 2, you used semantic HTML elements (<header>, <nav>, <main>, <section>, <footer>). How did you apply these same semantic elements in your Lab 3 dashboard? Give specific examples of where you used them.
 - a) I applied the semantics to my code, nav for my sidebar navigation showing the profile, setting and log out and my I used table for grouping the date, activity and status. Some didn't get to be used since its not in the provided code.
2. In both Lab 2 and Lab 3, you selected and applied a color scheme to your web pages.
 - a. Describe the color scheme you selected for your dashboard. What type of color harmony did you use (monochromatic, complementary, analogous, or triadic)? List your colors with their hex codes and explain why you chose this particular scheme for your chosen business theme.
 - a) My color scheme that I selected uses 3 color harmony; Analogous Harmony for the main color scheme of the Dashboard it uses olive green, golden yellow and orange while the other is complementary which are orange and olive green making it opposite to each other and lastly Neutral Harmony which are cream and black for the background and text of the Dashboard making it cozier to the eyes.
 - #606C38
 - #283618

SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

■ #000000

- b. In Lab 2, you wrote custom CSS from scratch to style your webpage. In Lab 3, you used Bootstrap and then overrode its default styles. Explain the difference between these two approaches. What are the advantages of using a framework like Bootstrap compared to writing all CSS from scratch?
- Using Custom CSS gives you more room for experimentation and freedom when designing your webpage while Bootstrap is already created and ready to use but at the cost of freedom when designing your webpage, less room for creativity. Using Bootstrap is making your web creation far more faster than writing CSS from scratch.
- c. Provide at least three examples of CSS properties you used in Lab 3 that you also used in Lab 2 (e.g., background-color, padding, margin, border-radius, box-shadow). How did you apply them differently when customizing Bootstrap?
- Lab 3 uses bootstrap which makes it the primary that's why using the background-color overrides the default card and button colors to use my main color to match my theme. Applying padding, margin and border-radius and box-shadow, allows me to manipulate its sizes, shape and edges while Bootstrap customization allows me to make it more cleaner, since I can just adjust it in the line itself.
3. This exercise introduced you to client-side scripting using JavaScript.
- Explain the purpose of the localStorage object in your login system. How does it help simulate user authentication between the login page and the dashboard page? Provide specific code examples from your login.js or dashboard.js files.
 - localStorage object keeps the login status of the user across the pages since allowing you to go to dashboard if you're already stored the info of the user.
`const isLoggedIn = localStorage.getItem('isLoggedIn');`
`if (isLoggedIn !== 'true') window.location.href = 'index.html';`
This specific codes acts as a restriction if the user tries to enter dashboard without logging in first, by redirecting them to index.html.
 - What is an event listener in JavaScript? Identify two different event listeners you used in your project. Explain what each one does and why it improves user experience.
 - Even listener allows the user to interact with the webpage like pressing a button the redirects them to other pages or using a certain key for movement. In my program is used `usernameInput.addEventListener` and `passwordInput.addEventListener` for allowing the user to input and use their username and password to access the website. This improves the user experience since they can actually type and use their information to access the webpage.

c. Client-side scripting is described as programs that are executed on the client-side in response to user actions. Explain how your JavaScript code demonstrates this concept. How does your code respond to user actions to create a more interactive experience compared to the static page from Lab 2?

- a) In my JavaScript code the scripts checks for the username and password if it's the correct data and saves it to the locacstorage. This is Client-side scripting a program that are execute on the client-side basing it into their action, in which my case the login, which saves the username and password of the user. EventListener and different function such as updateGreeting and updateStatistic elevates user interactive experience compared to our static page from Lab 2.

RAMON MAGSAYSAY MEMORIAL COLLEGES

Information Technology Education Program

1st SEMESTER: AY: 2026 - 2027

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

The screenshot shows a Visual Studio Code editor window with the file explorer on the left and the code editor in the center. The file explorer shows a project structure for 'lab1_2411600058_JIKIRI' with files like 'index.html', 'dashboard.html', 'style.css', 'login.js', and 'dashboard.js'. The code editor displays the content of 'dashboard.html', which is an HTML file using Bootstrap 5. The code includes a container-fluid with a row of three columns. Each column contains a card with a title and a value. The first card has a success message, the second has an info message, and the third has a warning message. The status bar at the bottom indicates the file is 'A-liver (3 days ago)' and the current position is 'Ln 82, Col 27'.

The screenshot shows a Visual Studio Code editor window with the file explorer on the left and the code editor in the center. The file explorer shows the same project structure as the previous screenshot. The code editor displays the content of 'dashboard.html', which is an HTML file using Bootstrap 5. The code includes a container-fluid with a row of three columns. Each column contains a card with a title and a value. The first card has a success message, the second has an info message, and the third has a warning message. The status bar at the bottom indicates the file is 'A-liver (3 days ago)' and the current position is 'Ln 110, Col 58'.

NAME: _____ SCHEDULE: _____ SCORE: _____
SUBJECT: **WEB SYSTEMS AND TECHNOLOGIES** INSTRUCTOR: _____ DATE: _____

The screenshot shows a VS Code editor with a web application project. The Explorer sidebar on the left displays the file structure, with 'dashboard.html' selected. The main editor shows the HTML code for 'dashboard.html', which includes a Bootstrap container, a table with a single row, and Bootstrap/JavaScript CDN links. The status bar at the bottom indicates the file is at line 116, column 41, and the system clock is 12:31 AM on 20/08/2026.

The screenshot shows a GitHub repository page for 'A-liver / lab3_2411600058_JIKIRI'. The 'Commits' tab is selected, showing a history of commits for the file 'lab3_2411600058_JIKIRI'. The commits are listed in descending order of time, with the most recent commit at the top. Each commit entry includes the commit message, the author (A-liver), the time since the commit, and the commit hash. The commit messages are 'Added Laboratory Exercise 3: Login & Dashboard System with Bootstrap 5'. The commit hashes are 5903a5f, e528a9, f317e28, and b27b905. The page also shows a search bar, a 'Type to search' prompt, and a 'Type to search' prompt.

The screenshot shows a color palette website with a palette named 'Olive Garden Feast'. The palette is described as 'Earthy olive and moss dance with creamy beige, warm gold, and rustic copper, evoking harvest feasts.' The palette consists of five colors: 606C38, 283618, FEFAE0, DDA15E, and BC6C25. The website also features a search bar, a 'Type to search' prompt, and a 'Type to search' prompt.

Conclusion

In conclusion lab 3 taught me that bootstrap can help your journey in webpage developing instead of just brute forcing everything via manually coding every program. In this Lab work we also learned how to use JavaScript which allows me to make my webpage more interactive than a static webpage from last 2 enabling me to simulate how a user interact and impacted their usage of my webpage. This helps me understand and add more knowledge to my webpage development, by using bootstrap, JavaScript, Html and Css manipulation.
